

CERTIFICATE OF TELEHEALTH SKILLS PROFICIENCY (CTHSP)

COURSE DESCRIPTION

More accessible, convenient healthcare for patients is the driving force behind the telehealth field. Telemedicine was originally developed in the U.S. as a way to address care shortages, especially in remote rural areas.

Now it is used around the world to provide basic healthcare and to allow patients with mobility issues or other conflicts to seek medical care from the convenience of home. Telemedicine has the power to not only break down typical geographical barriers to care access, but to make the entire healthcare delivery model more convenient for patients.

This course covers all of the major methods and models of modern telehealth including features, remote monitoring and reimbursement. It also includes a real-world hands-on workflow session and an action plan for implementing a telehealth component as part of a holistic medical delivery system.

POWERED BY 4PROPLUS 

LEARNING OBJECTIVES

- Understand the Origins of Telemedicine
- Discuss Methods and Models of Telehealth
- Understand Telehealth Requirements
- Discuss Protected Patient Health Information
- Explain Telehealth Reimbursement
- Develop a Telehealth Business Plan
- Define Remote Patient Monitoring
- Review Other Programs
- Engage in “Real World” Telehealth Practice
- Build a Telehealth Action Plan

AUDIENCES INCLUDE: clinical practitioners, consultants, practice managers and students

OPTIONAL ACCREDITATION: ANCC/ACCME Credit for Physicians/PAs/RNs/LPNs

LEARNING OBJECTIVES

Understand the Origins of Telemedicine

- Did you know that Telemedicine is over 70 years old? Discover how this method of health care delivery has evolved over time.

Discuss Methods and Models of Telehealth

- Learn about the different methods available for the provision of Telehealth services in various communities of care. This very versatile approach to health care is excellent for augmenting face to face health care delivery.

Understand Telehealth Requirements

- Gain a better understanding of the different requirements between government and commercial payers when it comes to Telehealth services. There are also Federal and State regulations to understand as you move forward with providing Telehealth Services.

Discuss Protected Patient Health Information and HIPAA regulations regarding Telehealth tools

- Review the elements of HIPAA privacy and security related to various telehealth resources

Explain Telehealth Reimbursement

- Understand the different types of reimbursement for Telehealth services and how these can vary based on insurance coverage. Discover resources to assist in determining coverage and reimbursement of Telehealth services.

Develop a Telehealth Business Plan

- Identify the key factors in developing a business plan for implementing a Telehealth program. Telehealth is bigger than just adding a new service and needs to be approached that way for successful implementation.

Define Remote Patient Monitoring

- Explain the differences in requirements and reimbursement between Telehealth Services and Remote Patient Monitoring.

Review Other Programs

- Describe other types of Telehealth Services such as those for ESRD, Stroke Patients, and Interprofessional Services.

Engage in a “Real World” Telehealth Workflow Practice Session

- Utilize a live digital HIPAA compliant telehealth platform to experience and practice standard Telehealth workflow steps.

Build a Telehealth Action Plan

- Develop a Plan of Action based on your learning. What are your next steps? What resources do you need? How are you going to make your Telehealth program a success?

HOURS OF STUDY: 2-3

OPTIONAL TOPIC VALUE-BUNDLE INCLUDES:

Certificate of Remote Workforce Management Proficiency and Healthcare Cybersecurity Proficiency Courses
